

Imatinib

Dasatinib

The chemical structure is a complex molecule with 39 numbered atoms. It features a central benzene ring (atoms 24-29) substituted with a trifluoromethyl group (atoms 36-39), a 2-aminophenyl group (atoms 1-8), and a 1-methyl-1H-imidazol-4-yl group (atoms 30-35). The 2-aminophenyl group is further substituted with a 2-aminophenyl group (atoms 9-14) and a 2-aminophenyl group (atoms 15-20). The 1-methyl-1H-imidazol-4-yl group is substituted with a 2-aminophenyl group (atoms 21-23).

Bosutinib

Gefitinib

Erlotinib
