[illegible]

The chemical structure shows a piperazine ring (a six-membered ring with two nitrogen atoms) connected via a methylene group to a pyridine ring. The pyridine ring is further connected to a pyrazole ring. The pyrazole ring is substituted with a fluorine atom (F) and a methyl group (CH₃). The bond length between the nitrogen atom and the carbon atom in the pyrazole ring is highlighted as 1.109 Å.

[illegible]

The image displays a chemical structure of a complex molecule. The structure includes a piperazine ring (a six-membered ring with two nitrogen atoms) connected to a pyridine ring (a six-membered aromatic ring with one nitrogen atom). The pyridine ring is further connected to an indazole system (a fused bicyclic system consisting of a benzene ring and an indazole ring). The indazole ring is substituted with a fluorine atom (F) at the 3-position. A bond length of 1.097 Å is indicated for the C-N bond in the indazole ring. The molecule is shown in a 3D representation with blue and green highlights on specific atoms and bonds.

Chemical structure of compound 11, showing a pyridine ring connected to a piperazine ring and a pyrazole ring, with a fluorine atom and a methyl group.
